

GRID
Network

**Are you a science teacher in
a primary or secondary school, or college?**

(physics, chemistry, biology, technology, etc.)

Let's work together to promote the attractiveness of science teaching

Major survey the framework of a European 'Socrates' project called **GRID** (Growing Interest in Development of Science Education), coordinated by the Pôle Universitaire Européen de Lorraine (France) with British, Belgian, Finnish, Hungarian, Irish and Italian partners. The project lasts two years (from October 2004 to September 2006).

The primary objective is to identify, catalogue and promote, across Europe, any primary- and secondary-age initiatives and innovations aimed at **boosting efforts to make science teaching more attractive.**

*This is a problem faced by everyone in the world
of education!*

As part of the project's dissemination activities, you will perhaps be able to feature on a European website among initiatives selected as representing good practice, which will serve as models for teachers across the whole of Europe.

Whether you are involved as a teacher with an *isolated classroom-based initiative*, or are running a *major local, county, regional, national or even transnational project*,
cela vous concerne !
